Info Sheet 4 - Project Update February 2012

Limitations of watershed-wide data narrow scope of the online Athabasca State of the Watershed Report—Phase 2

a workshop on January 19-20, 2012 to follow-up on the water, land/soil, and biodiversity through measurements by comprogress of their ongoing project, the online Athabasca State of the Watershed (SoW) Report—Phase 2 (SoW P2). The project started in September 2011.

Athabasca Watershed Counci

The consultant for the project, Fiera Biological Consulting, presented and requested input from workshop participants including the AWC-WPAC governing board and staff, and a representative from Athabasca University.

A major feature of the project is an online Interactive Atlas that presents watershed data and information in map format (spatial layers). Information can be viewed at the watershed, sub-watershed, and tertiary watershed scales. There are 10 sub-watersheds and 31 tertiary watersheds as shown in Fig. 1.

A key component of the SoW P2 project was to derive a Watershed Health Index (WHI) for each of the 10 subwatersheds and the entire Athabasca watershed. A complete WHI model was not possible at this time because watershed-wide data was available for only 11 pressure indicators out of a total of 33 condition and pressure indicators needed to determine overall watershed health. These are listed on page 2 and the 11 pressure indicators are highlighted in blue.

In the future, the WHI of each sub-watershed will be determined based on the health rank (poor, fair, good) of all the 33 condition and pressure indicators. These ranks will be based on scientifically determined thresholds. WHI of the entire Athabasca watershed will be based on the WHI of all the 10 sub-watersheds.

Of the 11 pressure indicators that have watershed-wide data, only 3 or 4 indicators have scientific thresholds that indicate pressures to watershed health. At this time, the data collected are not sufficient to determine the actual condition or health of the sub-watersheds or watershed. The pressure indicator maps will be presented in the online interactive Atlas showing pressure ranks (low, moderate, high) derived at the tertiary watershed scale. An example of this map for the indicator, stream connectivity, is shown in Fig. 2.

The project is scheduled to be completed on March 1, 2012. It will be a living online report and will continually be updated as more information is compiled.

Glossary of Terms:

Criteria are categories of conditions or processes that characterize the aquatic environment and can be used to evaluate watershed health. Indicators are measureable (quantitative) or descriptive (qualitative) variable that can be used to observe, evaluate, or describe trends as a criterion changes over time.

The Athabasca Watershed Council (AWC-WPAC) met for Condition indicators tell us exactly what is the condition of air, paring them with established thresholds or guidelines values. Pressure indicators result from human activities that pose risk to air, water, land/soil and biodiversity.

Criteria and Indicators for Determining the Athabasca Watershed Health Index

Criterion 1 Conservation of Biological Diversity

Proposed Indicator	Indicator Type	Proposed Measure
1.1 Fish Community	Condition	Occurrence of focal fish species
1.2 Aquatic Bird Community	Condition	Occurrence of aquatic bird guilds
1.3 Amphibian Community	Condition	Occurrence of focal species or species guilds
1.4 Macro-invertebrate Community	Condition	Intactness Index
1.5 Mammal Community	Condition	Species occurrence for mammals associated with aquatic or riparian habitats
1.6 Rare Species	Condition	Occurrence or rare or threatened species
1.7 Focal Habitat	Condition	Presence of critical habitat
1.8 Wetland intactness	Condition	Intactness Index
1.9 Stream Connectivity	Pressure	Contiguous reaches streams & rivers unimpeded by roads, dams, or control structures
Criterion 2 Maintenance of Surface Water	Quality	
2.1 Surface Water Quality	Condition	Seasonal measure of metals, nutrients, bacteria, & pesticides in major rivers
2.2 Lake Trophic Status	Pressure	Chlorophyll-a concentration
2.3 Landscape/Stream Intactness	Pressure	Total area of intact and road-less native vegetation, Riparian Health*
2.4 Land Use Nutrient Runoff Coefficient Model	Pressure	Landscape-level Index of Phosphorus, Nitrogen, & Sediment Stream Runoff
2.5 Sediment Quality	Condition	Seasonal measure of metals, nutrients, bacteria, & pesticides in river sediments
2.6 Water Clarity	Condition	Total Suspended Solids in the Athabasca main stem
Criterion 3 Maintenance of Ecologically Sig	gnificant Wa	ter Levels & Flows
3.1 River Water Flow & Availability	Pressure	River Flow Quantity Index; surface water allocation; flow vs. water conservation objectives
3.2 Lentic Water Availability	Pressure	Water availability in lakes & wetlands
3.3 Surface Water Withdrawals	Pressure	Total Volumes
Criterion 4 Maintenance of Groundwater C	Quality & Qu	antity
4.1 Groundwater Withdrawal	Pressure	Density of licensed wells; Maximum annual groundwater allocations
4.2 Groundwater Quality	Constitutions	
Criterion 5 Watershed Pressures	Condition	[Data deficient]
	Pressure	[Data deficient] Road density, density of all linear features
Criterion 5 Watershed Pressures		· · ·
Criterion 5 Watershed Pressures	Pressure	Road density, density of all linear features
Criterion 5 Watershed Pressures 5.1 Linear Disturbance 5.2 Linear Disturbance Change	Pressure Pressure	Road density, density of all linear features % increase in linear features density over time Areal extent (%) of human disturbances (agricultural land, surface mining, cutblocks, etc.) cover.
Criterion 5 Watershed Pressures 5.1 Linear Disturbance 5.2 Linear Disturbance Change 5.3 Land Use/Land Cover	Pressure Pressure Pressure	Road density, density of all linear features % increase in linear features density over time Areal extent (%) of human disturbances (agricultural land, surface mining, cutblocks, etc.) cover. Areal extent (%) of natural land cover (native forest, grassland, riparian, etc.)
Criterion 5 Watershed Pressures 5.1 Linear Disturbance 5.2 Linear Disturbance Change 5.3 Land Use/Land Cover 5.4 Land Use/Land Cover Change	Pressure Pressure Pressure Pressure	Road density, density of all linear features % increase in linear features density over time Areal extent (%) of human disturbances (agricultural land, surface mining, cutblocks, etc.) cover. Areal extent (%) of natural land cover (native forest, grassland, riparian, etc.) % Change in land use/ land cover by category between 1976-2010 Areal extent of land conversion from natural cover category to a human disturbance cover catego-
Criterion 5 Watershed Pressures 5.1 Linear Disturbance 5.2 Linear Disturbance Change 5.3 Land Use/Land Cover 5.4 Land Use/Land Cover Change 5.5 Land Conversion	Pressure Pressure Pressure Pressure Pressure	 Road density, density of all linear features % increase in linear features density over time Areal extent (%) of human disturbances (agricultural land, surface mining, cutblocks, etc.) cover. Areal extent (%) of natural land cover (native forest, grassland, riparian, etc.) % Change in land use/ land cover by category between 1976-2010 Areal extent of land conversion from natural cover category to a human disturbance cover category between 1976-2010
Criterion 5 Watershed Pressures5.1 Linear Disturbance5.2 Linear Disturbance Change5.3 Land Use/Land Cover5.4 Land Use/Land Cover Change5.5 Land Conversion5.6 Point Source Contaminants	Pressure Pressure Pressure Pressure Pressure	Road density, density of all linear features % increase in linear features density over time Areal extent (%) of human disturbances (agricultural land, surface mining, cutblocks, etc.) cover. Areal extent (%) of natural land cover (native forest, grassland, riparian, etc.) % Change in land use/ land cover by category between 1976-2010 Areal extent of land conversion from natural cover category to a human disturbance cover category between 1976-2010 Density of known industrial point source discharges
Criterion 5 Watershed Pressures5.1 Linear Disturbance5.2 Linear Disturbance Change5.3 Land Use/Land Cover5.4 Land Use/Land Cover Change5.5 Land Conversion5.6 Point Source Contaminants5.7 Agricultural Non-Point Source Contaminants	Pressure Pressure Pressure Pressure Pressure Pressure	 Road density, density of all linear features % increase in linear features density over time Areal extent (%) of human disturbances (agricultural land, surface mining, cutblocks, etc.) cover. Areal extent (%) of natural land cover (native forest, grassland, riparian, etc.) % Change in land use/ land cover by category between 1976-2010 Areal extent of land conversion from natural cover category to a human disturbance cover category between 1976-2010 Density of known industrial point source discharges Density of livestock; intensity & extent of agricultural inputs (pesticides, fertilizer, manure)
Criterion 5 Watershed Pressures 5.1 Linear Disturbance 5.2 Linear Disturbance Change 5.3 Land Use/Land Cover 5.4 Land Use/Land Cover Change 5.5 Land Conversion 5.6 Point Source Contaminants 5.7 Agricultural Non-Point Source Contaminants 5.8 Climate Regime	Pressure Pressure Pressure Pressure Pressure Pressure Pressure	 Road density, density of all linear features % increase in linear features density over time Areal extent (%) of human disturbances (agricultural land, surface mining, cutblocks, etc.) cover.
